

AI Contribution Statement

Student: David Eid Course: GIN446 - Web Programming Activity: Week 5 - Interactive JavaScript Quiz
Date: 30 September 2026

I used OpenAI Codex to assist with this activity. I supplied the course brief, screenshots, starter quiz files, Week 5 server, and my existing portfolio project.

AI implemented the ten-question data array and the quiz logic for saving answers, navigation, scoring, rounded percentages, performance messages, and correction generation. AI generated the dedicated quiz stylesheet to match my existing dark-and-gold site, integrated the provided Week 5 server and quiz template, corrected the template's nested main element, and added explanatory text and accessibility attributes. The supplied DOM rendering and result-display functions were retained.

AI also created automated logic checks, ran Flask route and profile-submission checks, and prepared review notes and submission documents. The automated checks passed. Real-browser visual and keyboard checks and live Render verification were not completed at the time this statement was prepared.

This assistance went beyond stylesheet generation and debugging. I do not claim that the AI-generated JavaScript or question data were independently written by me. I am responsible for checking whether this scope of AI assistance is permitted, reviewing and understanding the submitted code, and accurately reporting any additional work I perform.

Student review status: pending. Update this statement only with reviews, changes, and tests you actually complete before submission.
